2. Design a user interface prototype for a mobile station using Figma, considering connectivity and convenience.

Aim:

To design an interactive mobile application user interface prototype usingFigma that improves connectivity and convenience for users by providingstation information, live updates, route details, platformnumbers, andeasy navigation.

Software Used:

● Figma: For designing the user interface and creating an interactiveprototype.
● Web Browser: To access Figma and test the prototype. **Algorithm:**

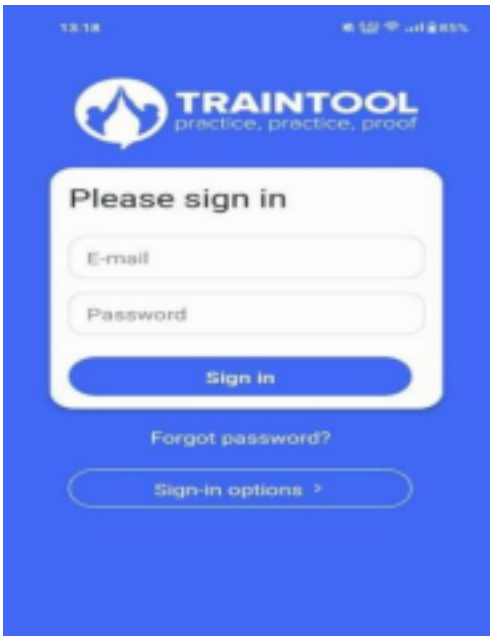

● Start.
● Open Figma and create a new design file. ● Create a mobile screen using a suitable frame.
● Design the home screen with station details and quick-access options. ● Add features such as live train status, platforminformation, routesearch, and notifications.
● Design additional screens for train schedules, connectivity, anddirections.
● Add buttons, icons, and navigation links.
● Connect the screens using Figma's Prototype mode. ● Preview and test the interactions.
● End.

Design:
The mobile station application is designed with a simple, user-friendlyinterface that allows passengers to access station information quickly.

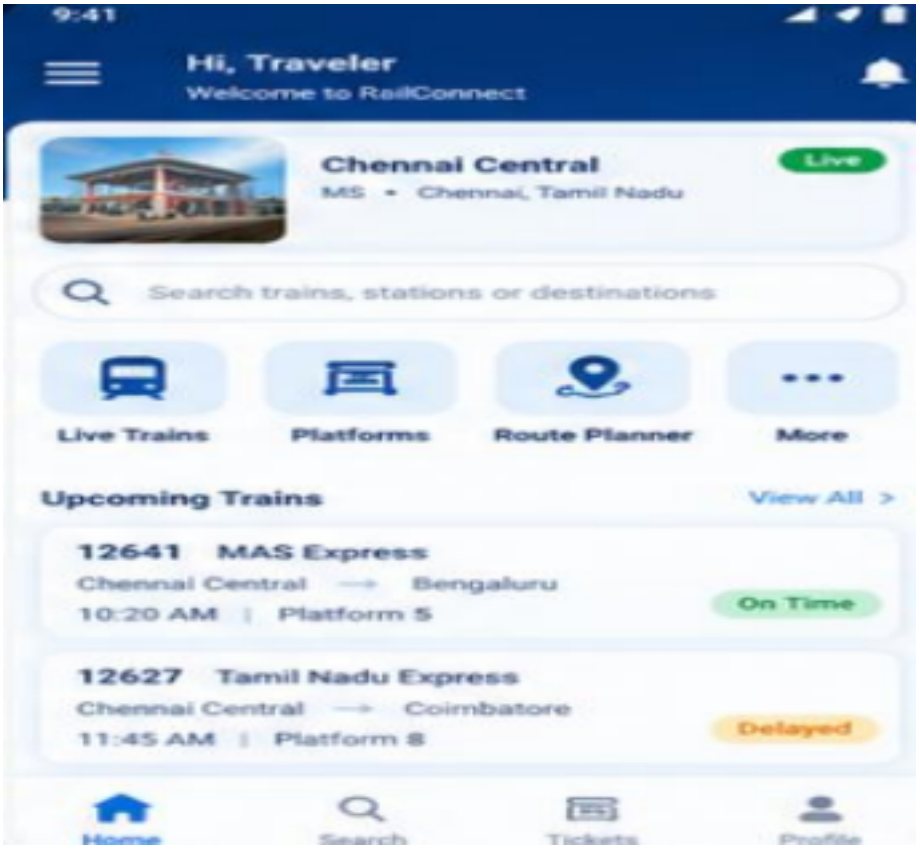

Main screen components:

● Header: Application name, location, and connectivity status. ● Search bar: Search for stations, trains, or destinations ● Live Train Status: Displays train arrival and departure information. ● Platform Information: Shows platform

numbers and changes. ● Route Planner: Helps users find routes to their destinations. ● Notifications: Provides alerts about delays and schedule changes. ● Navigation Bar: Provides easy access to Home, Search, Tickets, andProfile

Prototype:

Result:

Thus, a mobile station application UI prototype was designedusingFigma with a focus on connectivity and convenience. The prototypeprovides easy access to train schedules, platforminformation, routeplanning, and notifications through an interactive and user-friendlyinterface. It helps improve the passenger experience by makingstationinformation easier to access.
